261 The Center was created at the recommendation of Governor Thomas Carper. Its mission was to create a modern educational technology infrastructure in Delaware's public schools to enable students to meet academic standards set by the State Board of Education and develop skills needed by a world-class workforce. Delaware became the first state to have network access in every classroom.
270 The minutes show the date, place, and time of meetings, members present and absent, and business discussed. Subjects under consideration includes engineering and project management, policies, wiring schools, contracts, roles and responsibilities for the Board of Directors, goals, status reports, policy manual, budgets, and annual reports.
